

Edge Detection by Focal Statistics (Standard Deviation)

We try to detect the edges of buildings and objects in an area of Humber Bay, Ontario by applying Focal Statistics with the standard deviation filter to the DSM. The filter size is 5 x 5. The top-right map is DSM with hill shade (CSR), bottom-left is the result of Focal Statistics (STD), and bottom-right is the polygon map with the > 2.5 metres areas colored (PG).

STD (bottom-left)

Standard Deviation

PG (bottom-right)

 >= 2.5 metres

CSR (top-right)

Elevation
